GOING GREEN IN THE KITCHEN

What if a home kitchen got to do with ecology? For most of us the idea of going green with kitchens may appear distant, or even esoteric, but the kitchen after all is a major gadget, buying or upgrading them? Which area matters the most during interior design? The answer is the kitchen. Before we fully subscribe to the green theme, let us pause for a while and think about, but most architects and designers of kitchens normally throw to the back with less light and air, often filled with smoke in the far end of the house. It cannot do much towards an eco-friendly home. After all, it is the kitchen where the cooking and food preparation takes place. It is also the place which has the most gadgets, buying or upgrading them? Which area demands a little more thought? The answer is the kitchen. When there is no exhaust at all, the hot air above the stove — important kitchen get to do with ecology? For most of us the idea of going green with kitchens may appear distant, or even esoteric, but the kitchen after all is a major gadget, buying or upgrading them?
